

# Build image dari wso2 mi failed. Caused by: com.spotify.docker.client.exceptions.DockerException

Ketika melakukan build image docker / kubernetes di integration studio tampil error di log :

```
[ERROR] pull access denied for docker.wso2.com/wso2mi, repository does not exist or may require 'docker login': denied: requested access to the resource is denied
```

Ini terjadi apabila kita menggunakan image dari docker.wso2.com karena di pom.xml perlu ditambahkan repoUserName dan repoPassword dockerhub :

```
<plugin>
  <groupId>com.spotify</groupId>
  <artifactId>dockerfile-maven-plugin</artifactId>
  <version>${version}</version>
  <configuration>

    <username>repoUserName</username>

    <password>repoPassword</password>

    <repository>${docker.image.prefix}/${project.artifactId}</repository>

    <buildArgs>

      <JAR_FILE>target/${project.build.finalName}.jar</JAR_FILE>

    </buildArgs>
```

```
</configuration>  
</plugin>
```

setelah itu simpan dan build ulang. Solusi kedua kita bisa pull image dulu di terminal dengan

```
sudo docker pull docker.wso2.com/wso2mi:latest
```

dan tambahkan di pom.xml kode berikut :

```
<pullNewerImage>false</pullNewerImage>
```

contoh :

```
<configuration>  
  <dockerfile.repository>${dockerfile.repository}</dockerfile.repository>  
  <dockerfile.tag>${dockerfile.tag}</dockerfile.tag>  
  <buildArgs>  
    <BASE_IMAGE>${dockerfile.base.image}</BASE_IMAGE>  
  </buildArgs>  
  <pullNewerImage>false</pullNewerImage>  
</configuration>
```

ulangi build image.
